

Sarah Smith

Data Scientist & ML Engineer

Email: sarah.smith@email.com | Phone: +1-555-0255 | Boston, MA | github.com/sarahsmith

Professional Summary

Highly skilled Data Scientist with 5 years of experience designing and deploying machine learning models, natural language processing pipelines, and deep learning neural networks. Expertise in Python, PyTorch, SQL, and cloud deployments (AWS). Passionate about turning complex data into actionable business intelligence.

Professional Experience

Senior Data Scientist | Analytics Corp (2023 - Present)

- Spearheaded the deployment of a transformer-based NLP chatbot that resolved 40% of customer support queries automatically.
- Developed a real-time anomaly detection system in Python and PyTorch, saving the company \$150k annually in credit card fraud.
- Managed a team of 3 data scientists and established ML engineering best practices.

Data Analyst | Insight Data Partners (2021 - 2023)

- Built predictive models using scikit-learn to forecast customer churn with 85% recall.
- Extracted and processed large scale datasets using SQL and Spark pipelines.

Technical Skills

Languages: Python, R, SQL, C++, Java

Machine Learning: Deep Learning, PyTorch, TensorFlow, NLP, Scikit-Learn, Pandas, NumPy

Cloud & Databases: AWS (S3, SageMaker, EC2), PostgreSQL, MongoDB, Git, Docker

Projects

AI-Driven Fraud Detection Engine

- Designed a deep learning autoencoder neural network in PyTorch to detect fraudulent transactions.
- Processed a highly imbalanced dataset of 10M+ transactions, achieving an Area Under ROC curve of 0.96.

Semantic Search Engine (NLP Project)

- Developed a semantic search tool using SentenceTransformers and FAISS (Facebook AI Similarity Search) to retrieve documents based on user intent.
- Deployed the final engine as a containerized microservice on AWS ECS using FastAPI.

Education

M.S. in Data Science | Northeastern University (2021)

B.S. in Mathematics | University of Massachusetts (2019)
